DETAILED ACTION

Specification

1. Applicant is reminded of the proper language and format for an abstract of the disclosure. The abstract of the disclosure is objected to because the form and legal phraseology often used in patent claims, such as "**means**" and "said," should be avoided. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1,2 and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Kade et al '611.

Kade discloses a motor-driven power steering control apparatus having a motor driving means *for* driving a assist motor on the basis of a motor drive command value outputted from a motor drive command value correcting means (column 1-14), wherein the control means comprises a motor drive command value arithmetic means based on a detection signal outputted from a steering state detecting means; with a trouble detecting means, and a motor drive command value correcting means that decrements from a predetermined initial value as a function of time lapse, such that the motor drive command value correcting means includes a smoothing means associated with a value employed as a predetermined initial value, wherein the

Art Unit: 3611

motor drive command value correcting means is designed to employ a value whose maximum is previously limited as a predetermined initial value as broadly claimed; as best understood.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kade et al '611 in view of Chandy et al '144.

Kade as stated above discloses a power steering control apparatus having a smoothing means as broadly claimed, but failed to disclose a smoothing means implemented as a low-pass filter as understood.

Chandy is cited as disclosing a control means in a power steering control apparatus that utilizes a smoothing means implemented as a low-pass filter capable of dynamically changing characteristics of the control means by filtering parameters of the steering control means (column 3-13).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified the control means of Kade power steering control apparatus with a filtering means such as a low pass filter within the control apparatus in order to obtain enhanced results within the control parameters of the system utilizing a filtering routine as is well known in

Art Unit: 3611

the control art for reducing noise and maintaining corrective values for enhancing control systems.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kleinau '335, Okanou et al '913, Noro et al '926 and Hori et al '525 disclose power steering control apparatuses.
